

# Current building cost per square metre in Nairobi, Coastal and Western Regions - April 2018

Below you will find the general rebuilding rates that have been calculated by using the figures provided by the Institute of Quantity Surveyors published in December 2016 and applied estimated loadings for inflation and professional fees. If you are not VAT registered, these figures should also be increased by the current VAT rate. The rates shown below are general rates for building works excluding site works and care should be exercised in comparing costs of various buildings without considering other factors like location; specification of building materials; walls to floor ratio, floor to ceiling heights; site topography; type of joinery fitting and quality of Electrical and Mechanical installations. Rates in coastal towns like Mombasa are generally higher.

**The JW Seagon Group and The institute of Quality Surveyors of Kenya, it's Council and the publisher shall not be responsible for errors in the rates published herein or for any damage or loss whatsoever resulting therefrom or for any reliance thereon in the metre squared rates. To ensure accurate vaules, you should consider employing a professional valuer.**
